BANK CHURNER

[Reduce Churn Rate]

Presented by Seul Lee
Nov.08.2021

Bank Churner

Title	Objective	Variables	Numeric variables - T-test	Total Relationship Count	Month Inactive	Contacts count
-------	-----------	-----------	----------------------------	--------------------------	----------------	----------------

Problem Statement

Churn is a serious issue because it costs a lot for customer to stop doing business. For example, the Havard Business School report claims that on average, a **5% increase** in customer retention rates results in 25% - 95% increase of profits.

The bank decided to **find a group of customers that is more likely to leave** than others and **offer better marketing service to reduce churn rate**.

This data consists of **10,127** customers mentioning their gender, salary, marital satatus, credit card limit, etc.

Current churn rate is **16.07%**.

Churn Rate

Attrition Flag	
Attrited Customer	16.07% 1,627
Existing Customer	83.93% 8,500

Bank Churner

Title	Objective	Variables	Numeric variables - T-test	Total Relationship Count	Month Inactive	Contacts count
-------	-----------	-----------	-------------------------------	-----------------------------	----------------	-------------------

Variables in dataset

Divided the variables into numeric and categoric variables.

Numeric Variables	Categoric Variables
Customer Age	Gender
Months on book	Education Level
Total Relationship Count	Marital Status
Months Inactive 12 mon	Income Category
Contacts Count 12 mon	Card Category
Credit Limit	Dependent Count
Total Revolving Bal	
Avg Open To Buy	
Total Amt Chng Q4 Q1	
Total Trans Amt	
Total Trans Ct	
Total Ct Chng Q4 Q1	
Avg Uilization Ratio	

Bank Churner

Title	Objective	Variables	Numeric variables - T-test	Total Relationship Count	Month Inactive	Contacts count
-------	-----------	-----------	----------------------------	--------------------------	----------------	----------------

T-test

Implemeted T-test with numeric variables to establish significance.

*Attritred customer and existing customer classes are releveled to 1 and 0 respectively.

Significant numeric variables are :
Total_Relationship_Count / Months_Inactive_12_mon
Contacts_Count_12_mon / Credit_Limit
Total_Revolving_Bal / Avg_Utilization_Ratio
Total_Amt_Chng_Q4_Q1 / Total_Ct_Chng_Q4_Q1
Total_Trans_Amt / Total_Trans_Ct

t-Test: Two-Sample Assuming Equal Variances		
	Contacts_Count_12_mon_0	Contacts_Count_12_mon_1
Mean	2.356352941	2.972341733
Variance	1.169503111	1.18927145
Observations	8500	1627
Pooled Variance	1.17267776	
Hypothesized Mean Difference	0

Summary

The bank needs to focus more on the customers with below conditions and offer better marketing service.

*Total Relationship Count : 3 or less
Inactive Months in the last 12 months : 3 or more
Contancts Count in the last 12 months : 3 or more
Total Transcation Amount : Under 71 transactions
Total Transaction Count : Lower counts
Total Amount change (O4 over O1) : Lower average
Total Count Change (O4 over O1) : Lower average
Average Utilization Ratio : Lower average*
